# ARTESYN PTH12050 

12 Vin Single Output

Advanced Energy's Artesyn PTH12050 series of non-isolated DC-DC converters complies with the Point-of-Load Alliance (POLA) standard. The converters offer some of the most advanced POL functions in the industry, including Auto-Track ${ }^{T M}$ sequencing for controlled power-up/power-down of complex semiconductor devices such as DSPs, FPGAs and ASICs. Standard features include pre-biasstartup, input undervoltage lockout, remote On/ Off and auto resetting short-circuit protection.
There are two models in the PTH12050 series of converters, both of which have an input voltage range of 10.8 to 13.2 Vdc . One model offers an output voltage that can be trimmed from 0.8 to 1.8 Vdc , the other has an output that can be trimmed from 1.2 to 5.5 Vdc , enabling a broad diversity of semiconductor power needs to be satisfied. Rated at 33 watts, the converters offer up to $93 \%$ efficiency and can deliver up to 6 amps. Available in through-hole horizontal mount and surface-mount versions, they have a small $0.5 \times 0.87$ inch ( $12.7 \times 22.1 \mathrm{~mm}$ ) footprint and an installed height of just 0.33 inch ( 8.5 mm ).

## OUTPUT VOLTAGE ADJUSTMENT

The ultra-wide output voltage trim range offers major advantages to users who select the PTH12050. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 1.2 Vdc to 5.5 Vdc for suffix ' W ' and 0.8 Vdc to 1.8 Vdc for suffix 'L'. When the PTH12050 converter leaves the factory the output has been adjusted to the default voltage of 1.2 V for the PTH12050W and 0.8 V for the PTH12050L.

Efficiency Table: PTH12050W (lo = 5 A )

Notes:

1. Remote ON/OFF. Positive Logic

ON: Pin 3 open; or $V>\operatorname{Vin}-0.5 \mathrm{~V}$
OFF: Pin 3 GND; or $\mathrm{V}<0.8 \mathrm{~V}(\min -0.2 \mathrm{~V})$.
2. See Figure 1 for safe operating curve.
3. A $100 \mu \mathrm{~F}$ electrolytic input capacitor is required for proper operation. The capacitor must be rated for a minimum of 750 mA rms of ripple current. C2 $=10 \mu \mathrm{~F}$ ceramic capacitor, required for output voltages of 3.3 V and higher.
4. An external output capacitor is not required for basic operation. Adding $100 \mu \mathrm{~F}$ of distributed capacitance at the load will improve the transient response.
5. $1 \mathrm{~A} / \mu \mathrm{s}$ load step, 50 to $100 \%$ Iomax, Cout $=100 \mu \mathrm{~F}$.
6. If utilized Vout will track applied voltage by $\pm 0.3 \mathrm{~V}$ (up to Vo set point).
7. Tape and reel packaging only available on the surface-mount versions.
8. The pk-pk output ripple voltage is measured with an external $10 \mu \mathrm{~F}$ ceramic capacitor. See Figure 3 for Standard application schematic
